Research Interests

I am currently focusing my research efforts on enhancing the efficiency of testing and debugging large-scale industrial software. To accomplish this objective, I am actively exploring the following research areas:

- **BIC Identification:** Finding the Bug Inducing Commit (BIC) responsible for observed failures to efficiently assign and fix bugs in software systems involving numerous developers [3, 8]
- **Failure Clustering:** Clustering failures based on their root causes to support the utilisation of automated debugging techniques developed under the single fault assumption [5, 6]
- **Improving Test Suite Diagnosability:** Augmenting a test suite with additional test cases that can improve the precision of automated fault localisation techniques [4]
- **Flaky Failure Detection:** Automatically detecting flaky failures to expedite the continuous integration process and optimise the utilisation of both human and computational resources
