Research Interests

I am currently focusing my research efforts on enhancing the efficiency of debugging large-scale industrial software, aiming to optimise the utilisation of human and machine resources and expedite the continuous integration process. To accomplish this objective, I am actively exploring the following research areas:

- **BIC Identification:** Find the bug inducing commit (BIC) responsible for observed failures to efficiently assign and fix bugs in software systems involving numerous developers [1, 4]
- **Failure Clustering:** Clustering failures based on their root causes to support the utilisation of automated debugging techniques developed under the single fault assumption [3, 5]
- **Improving Test Suite Diagnosability:** Augmenting a test suite with additional test cases that can improve the precision of automated fault localisation techniques [2]
- **Flaky Failure Detection:** Automatically detecting flaky failures to optimize computational resources by eliminating the need for repetitive execution of failed test cases
